Methodology

Step 1

CFSs are divided into clusters based on their vicinity

Step 2

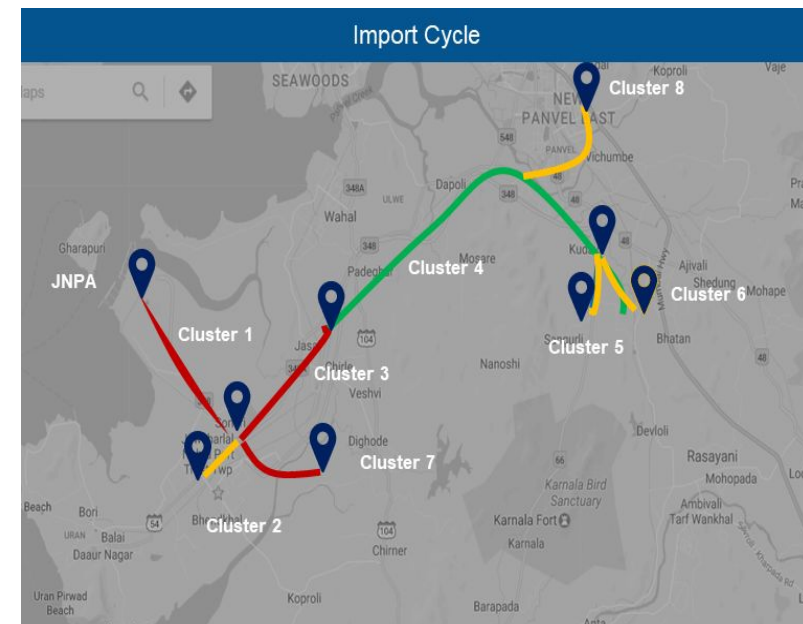

Cluster based transit time is calculated. The transit time is the travel time between CFS clusters and port or vice versa.

Step 3

Cluster based congestion level is calculated as per below steps:

1. Cluster based transit time is compared with threshold
2. Threshold is 3X of time showcased on Google Maps between the Origin-Destination (OD) pair
3. Intensity of congestion is classified as below:
 - High congestion: >2 times the threshold
 - Medium congestion: >1.5 to ≤ 2 times the threshold
 - Low congestion: >1 to ≤ 1.5 times the threshold

Congestion Level ■ High ■ Medium ■ Low

Congestion Analysis

An aerial photograph of a container ship's deck, filled with rows of colorful shipping containers in shades of red, white, blue, and green. The ship is moving through a grey, overcast sea, leaving a white wake. Overlaid on the image is a large blue Wi-Fi symbol in the upper left and a green circular icon with a grid pattern in the center. The text 'THANK YOU' is written in large, white, bold, sans-serif capital letters across the middle of the image.

THANK YOU
