August 2017

- Executive Summary
- LDB Analytics
- LDB Operations
- LDB Service Roadmap

DLDS's Logistics Databank Project is currently providing Container visibility services for more than 70% of India's Container Volume and as on date has provided services for more than **4 million EXIM Containers of India** in the western corridor starting from the port till the ICD's through a single window.

The performance trend across the JNPT region has shown improvements across various areas like Dwell time of Port terminals, CFs as well as Port to CFS/ ICD Delivery time. APM terminals performance which had gone bit down due to Ransomware attack has again improved this month.

There has been an increase in Container traffic at JNPT Terminals for the month of August 2017.

In pursuance to the meeting held with Container Shipping Lines Association ,DLDS team has initiated discussions with various shipping lines to enable them leverage LDB system effectively.

On going discussions with the Container handling Port terminals in Southern India to extend the LDB services which would help to create a **"Single container tracking system"** for the users on the Pan-India basis.

Testimonials

Logistics Databank has helped us in identifying the challenges across Rail container movement and congestions around the Port area.

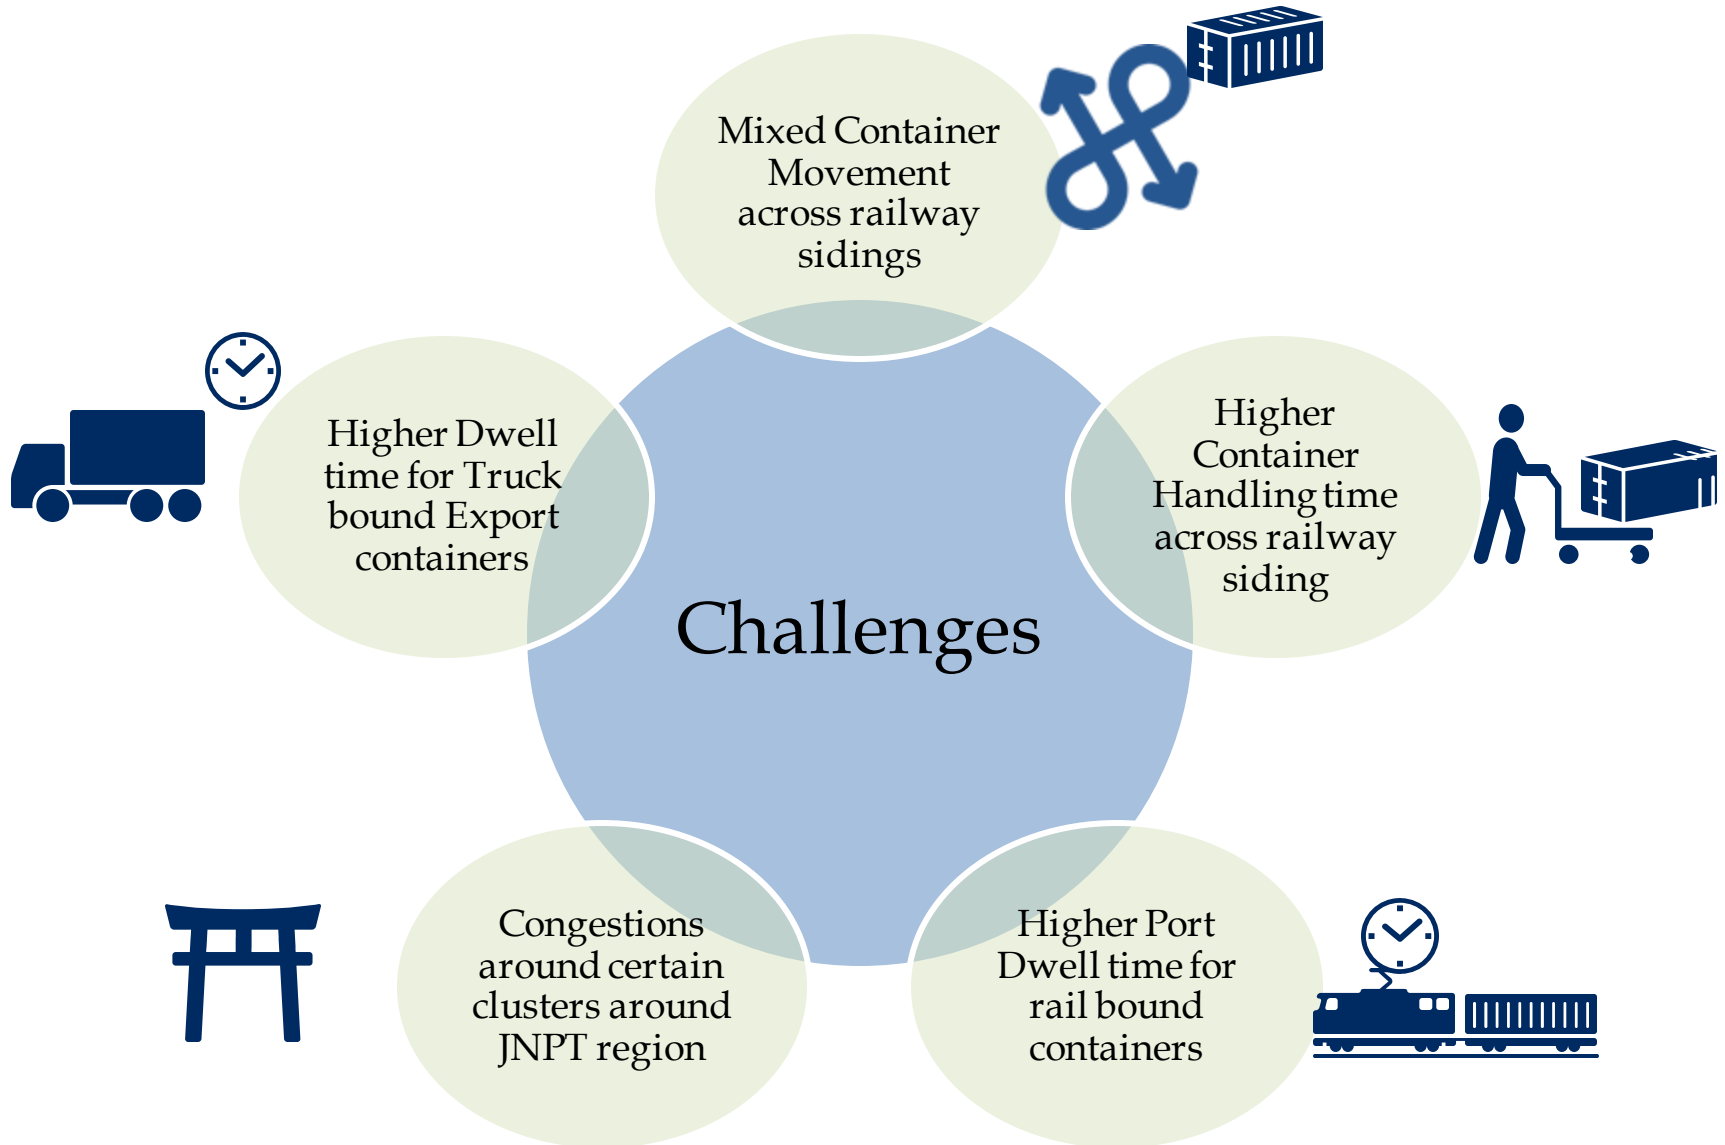

Shri Alok Mishra, Head Operations- APM Port Terminal

LDB's Performance benchmarking reports with respect to the competition is helping us focus on streamlining our processes to be the best in the industry"

Shri **DS Bharara**, VP Operations ACTL ICD

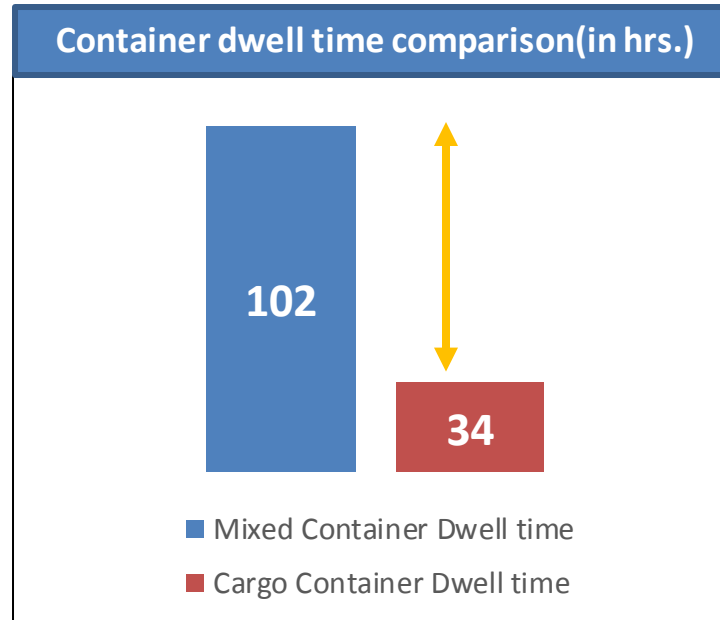

Helped us to track the route and the movement of an container which had met with an accident. This real time tracking was of immense help to all the stakeholders.

Capt Vinod Nair- VP Operations K-Line Shipping Line

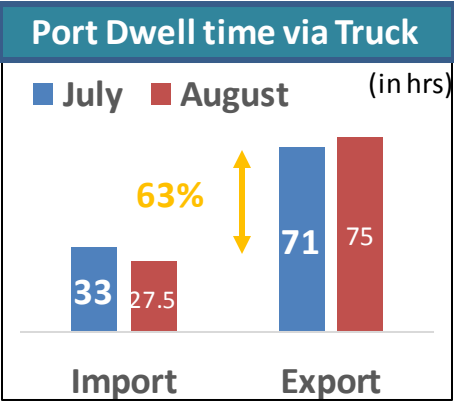

JNPT Challenge-Mixed Container Movement

Rail bound Containers arriving at rail siding of a different port terminal within the JNPT premise and then moving to its destination terminal .

- In terms of Dwell Time, time taken by Mixed containers for clearance at the port terminals is much higher in comparison to the regular movement of Containers.
- Mixed containers stacking at Yard of different terminal leads to challenges in retrieving the same and at times leads to the possibility of containers missing the vessel leading to loss of revenue for shipping lines.

High Port Dwell time via Truck in Export Cycle

30% of containers are taking > 4 days for clearance and having a dwell time of 112 hrs leading to overall export port dwell time

Pre-arrival of the Containers at for Export journey leading to increase in Port dwell time

Higher Container Handling time across Rail siding of Port terminals

Below figure depicts the container handling time for rail bound containers in export and import cycle

High CFS to Port delivery time caused by congestion

CFS Cluster : GTI Terminal

Base on container movement from port to CFS in Mumbai region, 26 CFS's have been grouped into 7 Clusters on the basis of their vicinity.

Below table shows all the clusters and the relevant data for GTI terminal

- In export cycle the GTI terminal is having congestion for traffic from cluster 2, cluster 3, cluster 6, cluster 7
- In import cycle the movement of traffic towards cluster 5, cluster 6 is facing congestion

GTI terminal for month of August'17				
Clusters	No. of CFS's in Cluster	Distance from Port (Km)	Import cycle time (in Hrs)	Export cycle time (in Hrs)
Cluster 1	1	8	0.95	6.9
